Understanding ACEs

Adverse Childhood Experiences

What are ACEs?

ACES are serious childhood traumas that result in toxic stress that can harm a child’s brain. The more ACEs a child experiences, the more likely he is to struggle with learning, playing in a healthy way with other children, making friends, and can result in long-term health problems.

Adverse Childhood Experiences can include:

- Physical abuse
- Verbal abuse
- Emotional neglect
- Physical neglect
- Mental illness
- Divorce
- Substance abuse
- Incarcerated relative
- Sexual abuse
- Bullying
- Witness violence outside the home
- Mother treated violently
- Racism, sexism, or any other form of discrimination
- Homeless
- Natural disasters
- Witness a sibling being abused

A Survival Mode Response to toxic stress increases a child’s heart rate, blood pressure, breathing and muscle tension. Their thinking brain is knocked off-line. Self-protection is their priority.

In other words:
“\textit{I can’t hear you! I can’t respond to you! I am just trying to be safe!}”

How do ACEs affect learning and health?

When a child repeatedly experiences fear and trauma this changes the brain and can affect learning and overall health. This makes it difficult to

- process and remember information;
- trust others;
- make friends;
- focus on school work;
- keep behaviors in check; and,
- may lead to long-term health problems.

The TASN School Mental Health Initiative (SMHI) is funded through a grant from the U.S. Department of Education (#H323A17006) and is administered by the Kansas Department of Education. The contents do not necessarily represent the policy of the U.S. Department of Education and endorsement by the Office of Special Education Programs should not be assumed. The SMHI does not discriminate on the basis of race, color, national origin, sex, disability, or age in its programs and activities. Inquiries regarding non-discrimination policies should be sent to: Deputy Director, Keystone Learning Services, 500 E. Sunflower Blvd., Ozawkie, KS 66070; 785-876-2214.
**What is resiliency?**
Resiliency is the ability to bounce back from frustrations and to recover from setbacks. Resilient individuals adapt to change, stress or problems. They are able to take things in stride. The result of this bouncing back is a feeling of success and confidence.

**Here are some things you can do to build your child’s resilience.**

**Be a Supportive Role Model**
- Be calm and consistent
- Admit your mistakes
- Celebrate successes
- Volunteer together
- Encourage positive social connections

**Teach Them Problem Solving**
- Don’t rush to solve problems or share the solutions
- Brainstorm solutions
- Discuss potential consequences

**Let Them Make Mistakes**
- Focus on strengths
- Provide genuine praise
- Focus praise on strategies, progress or effort: “I can tell you’ve been working really hard.”
- Provide opportunities to learn new skills

**Praise Them**
- Talk about emotions
- Show and teach empathy
- Model and teach social skills
- Teach ways to express emotions

**Build Their Confidence**
